New

The History of Medical Education

Edited by C. D. O'Malley

A score of international authorities survey the entire history of how physicians are trained. The experience of great clinicians, here accumulated, makes this an invaluable work on a subject of urgent importance.

1970 LC: 72–85449 608 pages 37 halftones 4 line drawings $20.00

Science and Morality in Medicine

A Survey of Medical Educators

Earl R. Babbie

This book reports a 1965–1966 national survey of medical school faculty members which measured the effects of scientific perspectives on medical practice. The author also analyzes the general interplay of science and morality in medicine, and identifies a tendency of the more scientifically oriented teaching physician to hold a deterministic image of man and to believe in a new social morality de-emphasizing individual responsibility.

1970 LC: 71–92674 320 pages $7.50

The History of Coronary Heart Disease

J. O. Leibowitz

This is an authoritative survey of the evolution of medical knowledge concerning heart disease from antiquity to the present day. The author's dual interests as a cardiologist and medical historian combined with his facility in modern and classical languages have enabled him to provide a broad, well-balanced appraisal of man's concepts and endeavors in this vital area of medicine.

1970 LC: 78–122931 240 pages 15 plates $8.50

New Printing, with Revisions

The Heart

Its Function in Health and Disease

Arthur Selzer, M. D.

Written by a leading heart specialist, this book provides the reader with a systematic, clear presentation of current views on the function and diseases of the heart and blood vessels. Told in a comprehensive and objective manner, it fills the gap between "popular" publications and books written for those with a medical background.

Starting with a background history, Dr. Selzer thoroughly covers such topics as structure and function of the heart, diagnosis and treatment of the abnormal heart, and classification and description of heart diseases including congenital defects, hypertension, and atherosclerosis. He explains the complexity of long-range treatment of chronic heart conditions and the dramatic possibilities of cardiac surgery and heart transplants today.

300 pages illustrations $6.95
